PREPARING TO INSTALL

This guide will walk you through the installation process for Line 6 POD[®] HD300 Edit, the free Preset editor/librarian application for Line 6 POD[®] HD 300 devices, for Mac[®] or Windows[®]. Here are a few pointers before you install the software.

Get the POD HD300 Edit Application

The latest POD HD300 Edit application installer is always available for free download from www.line6.com/software/.

The Line 6 Software Downloads page

Or, if you already have the Line 6 Monkey application installed on your computer, you can use it to grab POD HD300 Edit, as well as any available product updates (please see [“Line 6 Monkey™ & Additional Resources” on page 4•1](#)).

System Requirements

We recommend that you read the separate *POD HD300 Edit Release Notes* documentation for the full, detailed System Requirements, as well as up to date info on compatibility with other hardware, software and operating systems. This documentation is available from the [Line 6 Support](#), or from the [Line 6 Product Manuals](#) page.

POD HD300 Edit supports the following computer operating systems:

- Mac OS[®] X
 - 10.5 (Leopard[®])
 - 10.6 (Snow Leopard[®])

- Windows®
 - Windows® XP Service Pack 3
 - Windows Vista® Service Pack 2
 - Windows® 7
- POD HD300 Edit is a 32 bit application, but is compatible with both 32 bit and 64 bit Windows® & Mac® versions.

Please proceed to the Mac® or Windows® chapter for step-by-step installation instructions:

[“Installation on Mac OS® X” on page 2•1](#)

[“Installation on Windows®” on page 3•1](#)

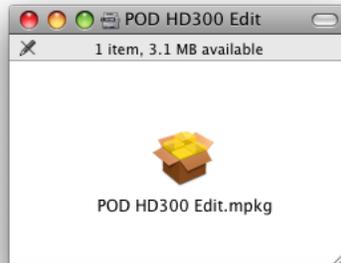

INSTALLATION ON MAC OS[®] X

To follow are illustrated steps for installing POD[®] HD300 Edit on Mac OS[®] X 10.5 (Leopard[®]). The installation process is the same if installing on Mac OS[®] X 10.6 (Snow Leopard[®]). Exit all other applications, and then proceed with the following steps.

Installing POD HD300 Edit

If you obtained the POD HD300 Edit installer by running Line 6 Monkey[™] (see [“Updating with Line 6 Monkey[™]” on page 4•1](#)), then you’ll see the following initial screen. If you downloaded the POD HD300 Edit installer from the Line 6 Software Downloads site, then you’ll need to double-click on the downloaded POD HD300 Edit (“.dmg”) file to open the following screen.

Double-click on **POD HD300 Edit.mpkg** as instructed to launch the installer.

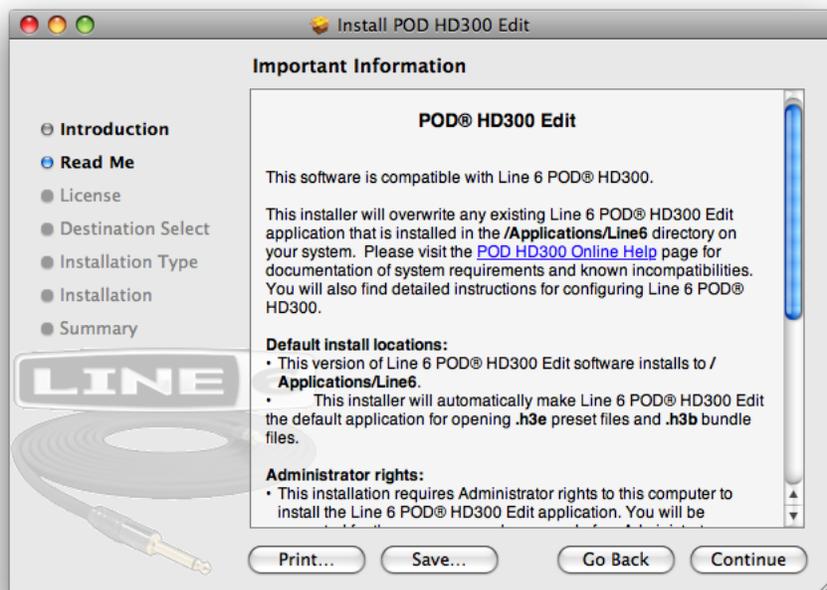

Welcome

When the installer starts, you will see the Welcome screen - read the text and click **Continue**.

Read Me

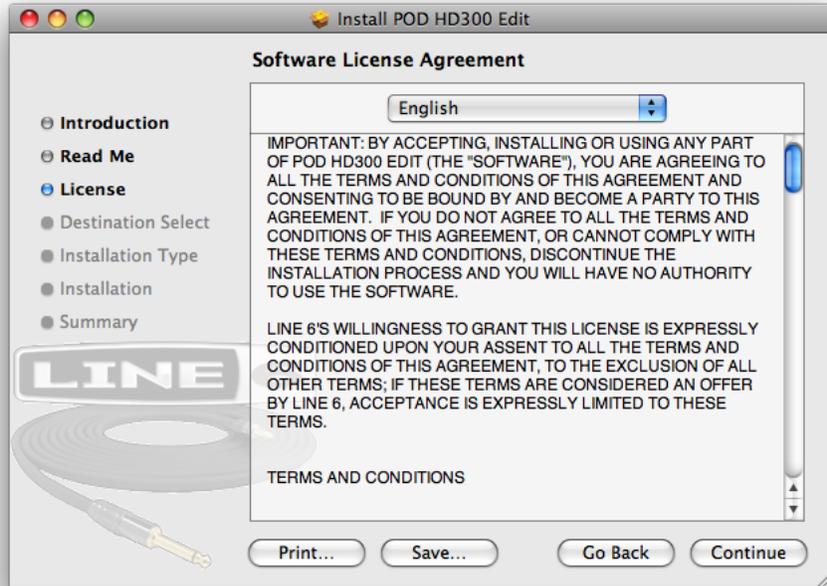

The POD HD300 Edit “Read Me” screen is presented next. It’s called “Read Me” for a good reason! Please review the information carefully, and click **Continue** when ready to proceed.

License Agreement

The installer presents you with the License Agreement. Read through the entire Agreement carefully, then click **Continue**.

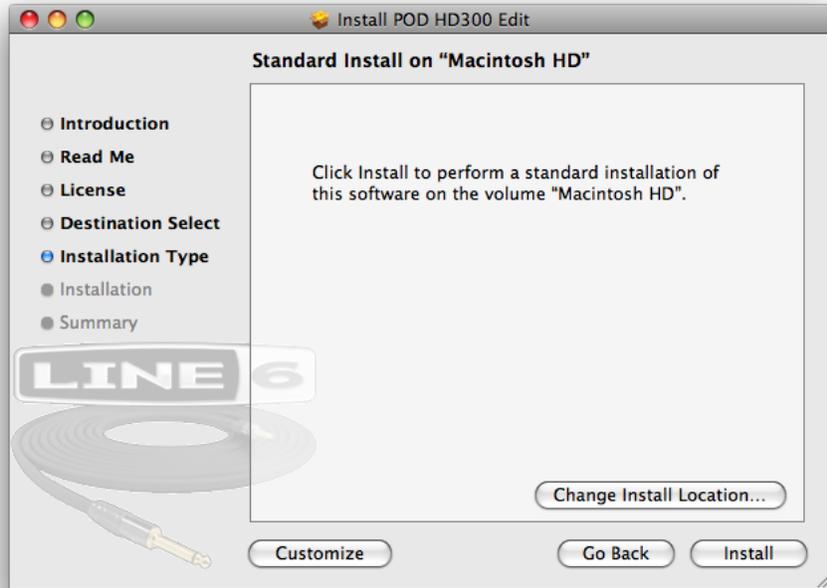

You'll then be prompted to accept this License Agreement. Select **Agree** if you consent to the terms and the Installer will allow you to proceed. If you disagree, you cannot install POD HD300 Edit.

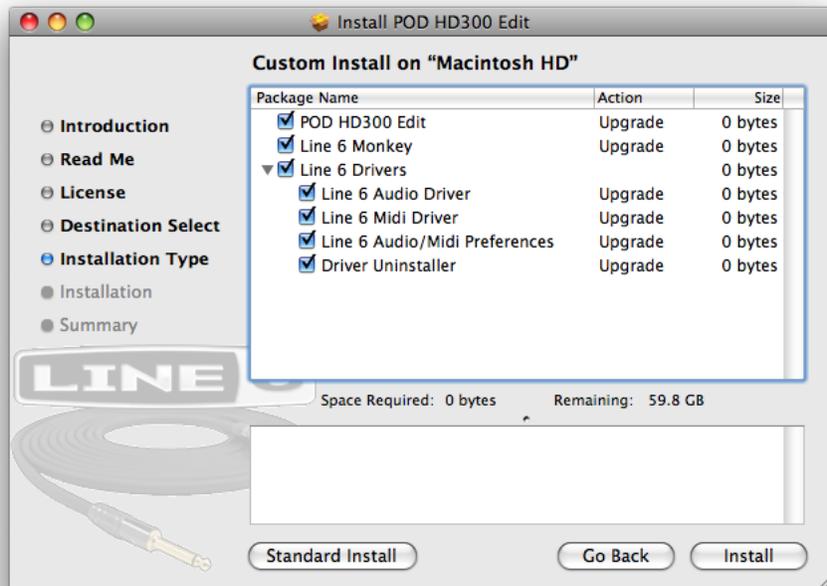

Installation Type

Here you have the choice to proceed with the “standard” installation, which essentially installs all necessary components (recommended for most users). Just click on **Install** to proceed with the standard installation. Or, click on the **Customize** button to select the specific components you want installed (for more advanced users).

If you clicked the **Customize** button, you’ll see the following screen:

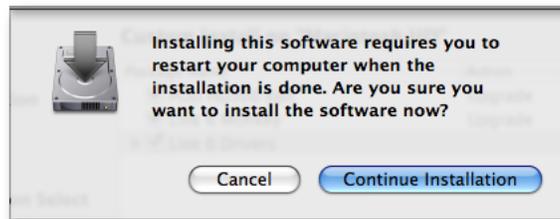

There are three main items available here. To “customize” your installation, check the desired components:

- The **POD HD300 Edit** application.
- The **Line 6 Monkey** application. If you already have the same (or newer) version of Line 6 Monkey installed, then the box for it will remain unchecked. (Please see [page 4•1](#) for more about Line 6 Monkey.)
- The **Line 6 Drivers**. It required to install all these driver components to allow the POD HD300 Edit application to communicate with your device. The drivers also provide the benefit of allowing you to utilize your POD HD300 device as a high performance USB audio and MIDI device with any popular Mac® DAW or audio playback applications!

Click **Install** once you’ve made your selections.

Restart Prompt

If you chose the standard installation, or checked the Line 6 Drivers components within the custom installation screen, you may be alerted that restarting your Mac® is necessary at the end of the installation process.

If you really don’t want to restart, the **Cancel** button will abort the installation. Otherwise, just click **Continue Installation** to finish the job!

Install - Authenticate

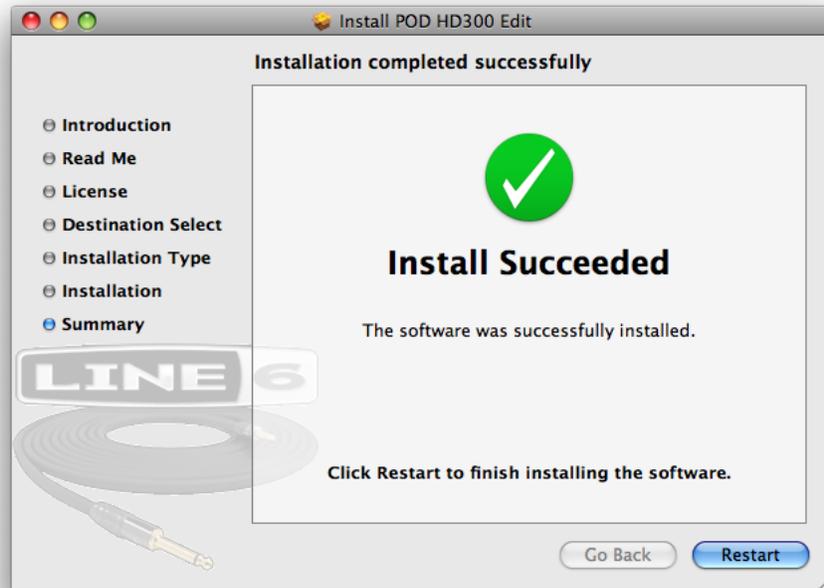

You will be prompted to authenticate your Mac® account name and password. Enter the credentials then click **OK**. The installation process will then run until completed.

Finish

And...tada! You're done. Click **Close** to exit the installer.

It is recommended that you next run Line 6 Monkey to allow it to check your system and see if there are any other available updates for your system. Please see [“Updating with Line 6 Monkey™” on page 4•1](#) for more information.

Uninstalling POD HD300 Edit

To remove the application from your computer, simply drag the **POD HD300 Edit** file from the Applications/Line 6 folder into the Trash. This will not remove your POD HD300 Edit Preset or Bundle files.

By default, POD HD300 Edit saves all its Preset & Bundle files to the **/Documents/Line 6/Tones/POD HD300 Edit** folder. If you want to permanently remove all these files, drag this folder to the Trash. However, we highly recommend you keep these around if you plan on installing POD HD300 Edit again. Or, copy the folder to a disk if you want to back them up or move them to another computer!

INSTALLATION ON WINDOWS®

To follow are illustrated steps for installing POD HD300 Edit on Windows® 7. The installation process is the same if installing on Windows Vista® or Windows® XP.

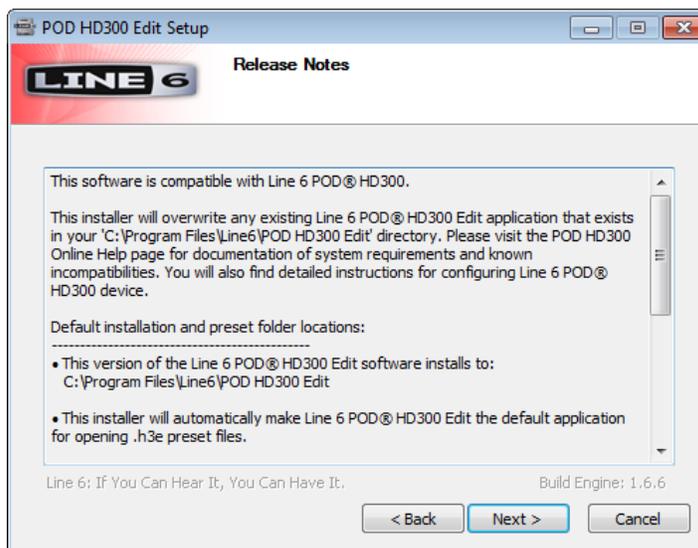

Installing POD HD300 Edit

When the installer starts, you will see the Welcome screen - Click **Next** to continue.

Release Notes

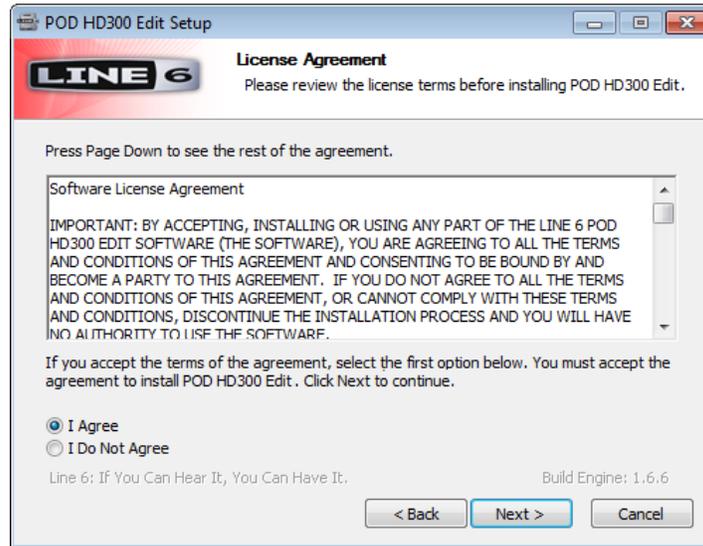

A dialog with detailed Release Notes is presented. Read it through carefully and click **Next** to proceed.

License Agreement

The installer presents you with a License Agreement that is required in order to install and use the Line 6 POD HD300 Edit application. After carefully reading the license, select the **I Agree** option if you consent to the terms of this license, then click **Next**. If you do not agree with the license, the installation will be cancelled.

Disconnect your Device

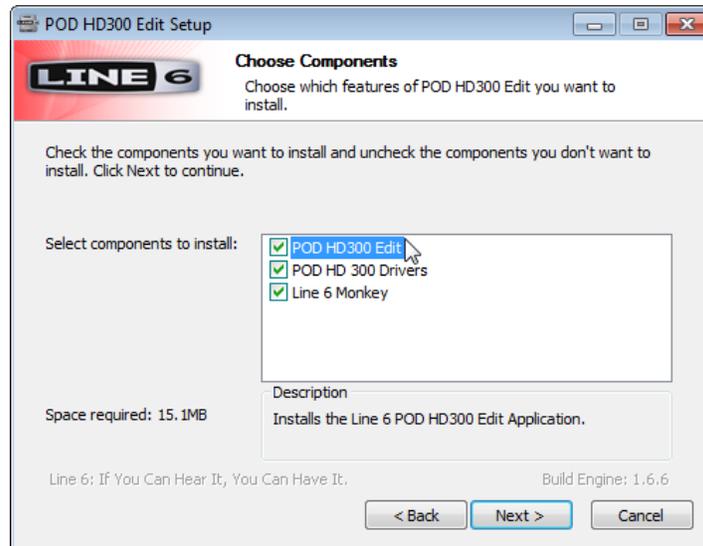

If you have not already done so, disconnect your USB cable from your POD HD300 device, then click **Next**.

Choose Components to Install

There are three items available here:

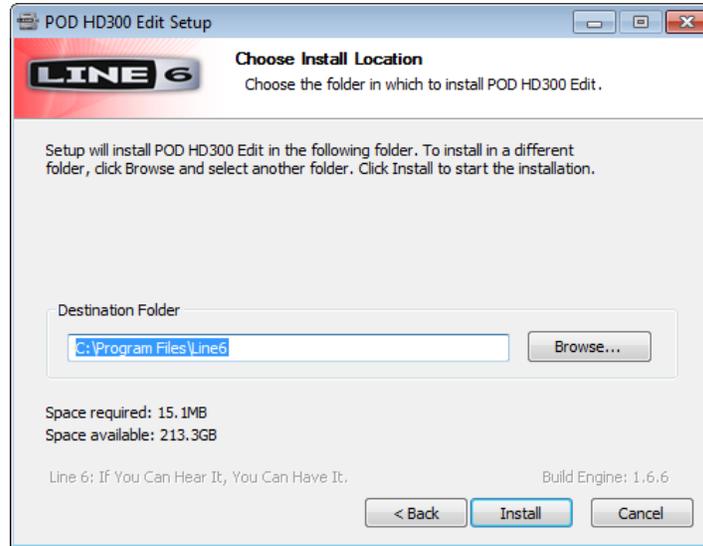

- The **POD HD300 Edit** application.
- The **POD HD300 Drivers**. It required to install all these driver components to allow the POD HD300 Edit application to communicate with your device. The drivers also provide the benefit of allowing you to utilize your POD HD300 device as a high performance USB audio and MIDI device with any popular Mac® DAW or audio playback applications!
- The **Line 6 Monkey** application. If you already have the same (or newer) version of Line 6 Monkey installed, then the box for it will remain unchecked. (Please see [page 4•1](#) for more about Line 6 Monkey.)

Click **Install** once you've made your selections.

Choose Install Location

If you'd like to install the POD HD300 Edit application into the default, recommended location, just click the Install button.* If you'd like to choose another location, click Browse:

*Note: On Windows® 64-bit systems, the POD HD300 Edit application is installed within the \x86\ Program Files\ directory path.

Security Alert

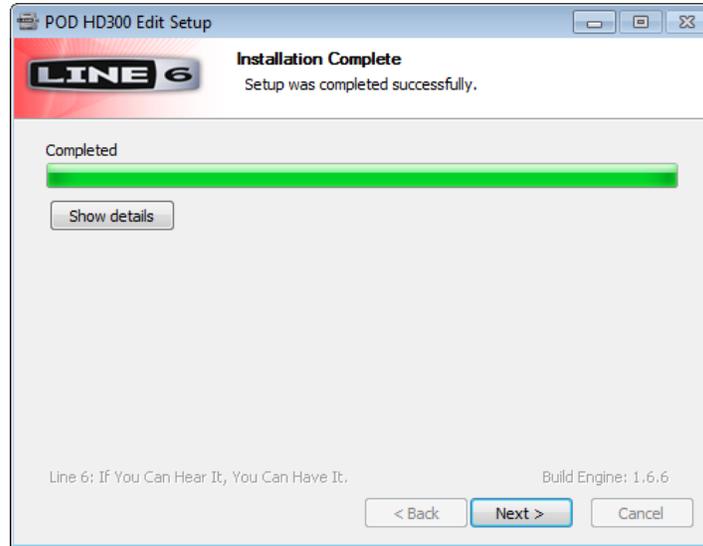

On Windows Vista® or Windows® 7, you may see this alert as the Driver files are being installed. This is a normal Windows® security feature, and it is perfectly safe for you to click the **Install** button and allow the installation to continue - we promise! You can optionally check the box for “Always trust software from Line 6” to avoid similar alerts on future Line 6 driver installs.

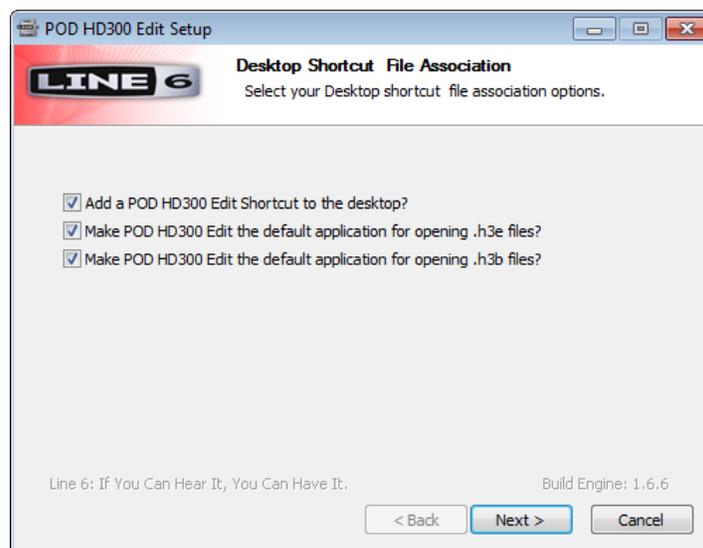

Allow Installation to Complete

Allow the POD HD300 Edit installation process to do its thing – it will inform you once the installation has completed successfully. Click **Next** to continue.

Desktop Shortcut and File Associations

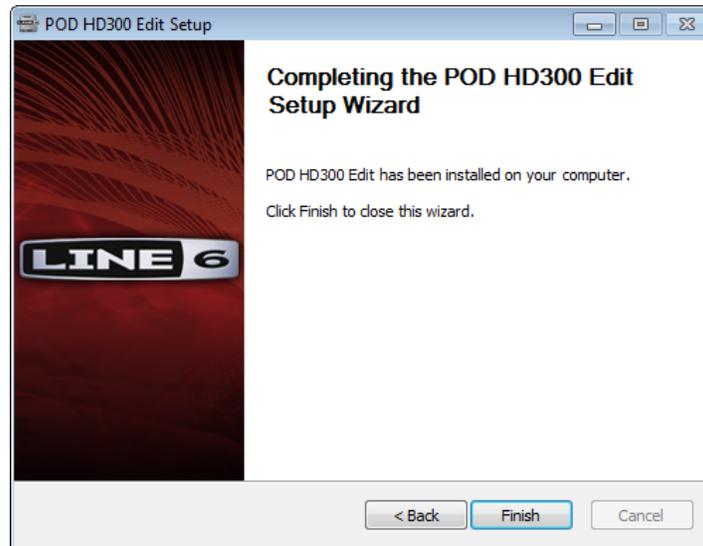

Next you are prompted if you would like a Shortcut icon for POD HD300 Edit to be added to your Windows® Desktop. You can also choose if you would like the POD HD300 Edit “.h3e” Preset and “.h3b” Bundle file types to be “associated” with the POD HD300 Edit application. (That is - if you double-click one of these types of files within Windows®, it launches the POD HD300 Edit application automatically and loads the Preset/Bundle). It is recommend to check all boxes here. Choose your options and click **Next**.

Finish

Done! The components you selected have been installed. Click the **Finish** button to exit the installer.

It is highly recommended that you next run Line 6 Monkey to allow it to check your system and see if there are any other available updates for your system.

Please see [“Updating with Line 6 Monkey™” on page 4•1](#) for more information.

Uninstalling POD HD300 Edit

The POD HD300 Edit installation also adds the **Line 6 Uninstaller** utility on your system. You can find it by going to the Windows[®] Start button>Programs>Line 6>Tools. The Line 6 Uninstaller allows you to remove POD HD300 Edit, and/or any other installed Line 6 applications or device drivers individually. The following examples show the process for uninstalling POD HD300 Edit application on Windows[®] 7 - The process is the same for Windows Vista[®] or Windows[®] XP. Be sure to first exit POD HD300 Edit and all other applications, disconnect all connected Line 6 devices from your computer, then launch the Uninstaller and follow these steps.

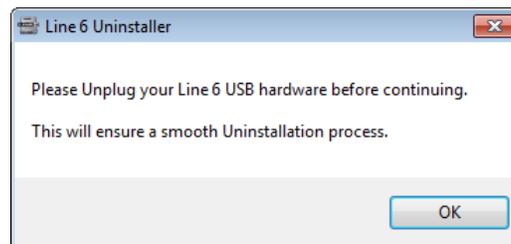

Welcome

The first screen welcomes you politely - click **Next** to continue, or **Cancel** if you've changed your mind and decided you cannot live without this cool Line 6 software.

Disconnect Your Hardware

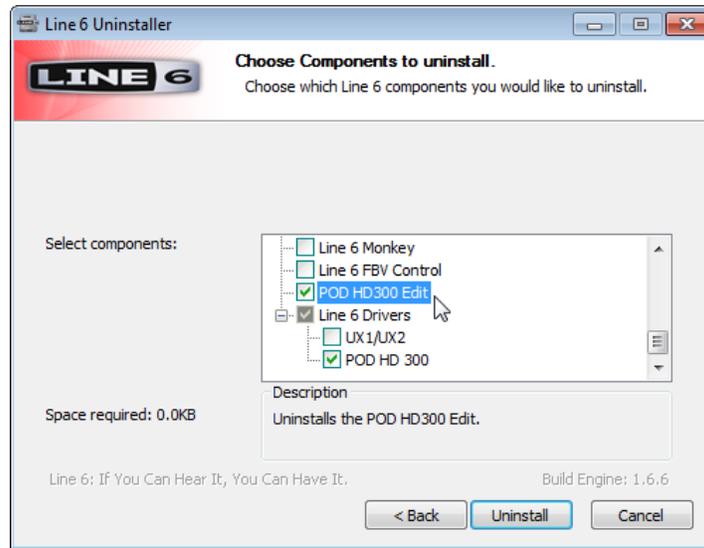

Another friendly reminder - If you have not already done so, please unplug the USB cable from any connected Line 6 hardware now. Click **OK** once items are disconnected, then **Next** to proceed.

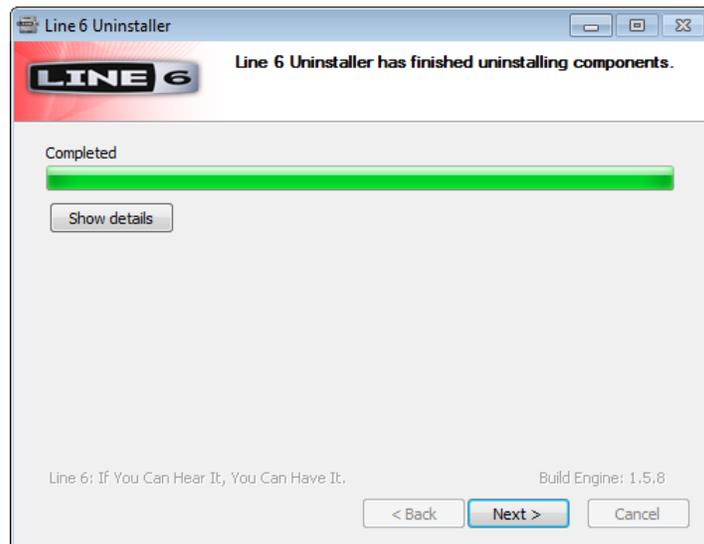

Choose Components to Uninstall

Here you can check any Line 6 items you want to remove. You'll see individual options for all Line 6 applications and device drivers installed on your computer (POD HD300 Edit, POD HD300 Device Drivers, Line 6 Monkey, etc.). For this example, we'll select only the POD HD300 Edit application and its Drivers. Note that Line 6 Monkey is unchecked by default. It is usually a good idea to keep Monkey hanging around since he'll still be able to show you what Line 6 items are available for your system, and guide you through downloads and installations (see "[Updating with Line 6 Monkey™](#)" on page 4•1 for more info). Once you've selected the desired components, click **Uninstall**.

Uninstall

The uninstallation process will now run its course. Click **Next** once it has completed.

Done!

This completes the process and the selected components are now removed from your system. Click **Finish** to close the dialog.

Removing POD HD300 Edit Presets & Bundles

The Line 6 Uninstaller does not remove any of your POD HD300 Edit Preset or Bundle files from your computer. By default, POD HD300 Edit saves all its Preset & Bundle files to the **My Documents\Line 6\Tones\POD HD300 Edit** folder.

If you want to permanently remove all these files, drag the above folder to the Recycle Bin. However, we highly recommend you keep them around if you plan on installing POD HD300 Edit again. Or, copy the folder to a disk if you want to move them to another computer!

LINE 6 MONKEY™ & ADDITIONAL RESOURCES

This chapter provides helpful information on obtaining Line 6 product updates and more online documentation.

Updating with Line 6 Monkey™

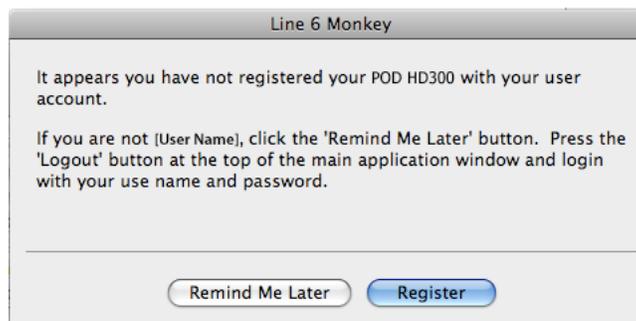

Line 6 Monkey is the intelligent update software utility, available free from Line 6. It is highly recommended that you use Line 6 Monkey to be sure you have the latest hardware updates & software versions for your POD HD300 device. If you already installed POD HD300 Edit, then you'll likely find Line 6 Monkey on your computer here:

- On Mac®, go to /Applications/Line 6 and double-click Line 6 Monkey.
- On Windows®, go to Start Menu \Programs \Line 6 \Tools \Line 6 Monkey.

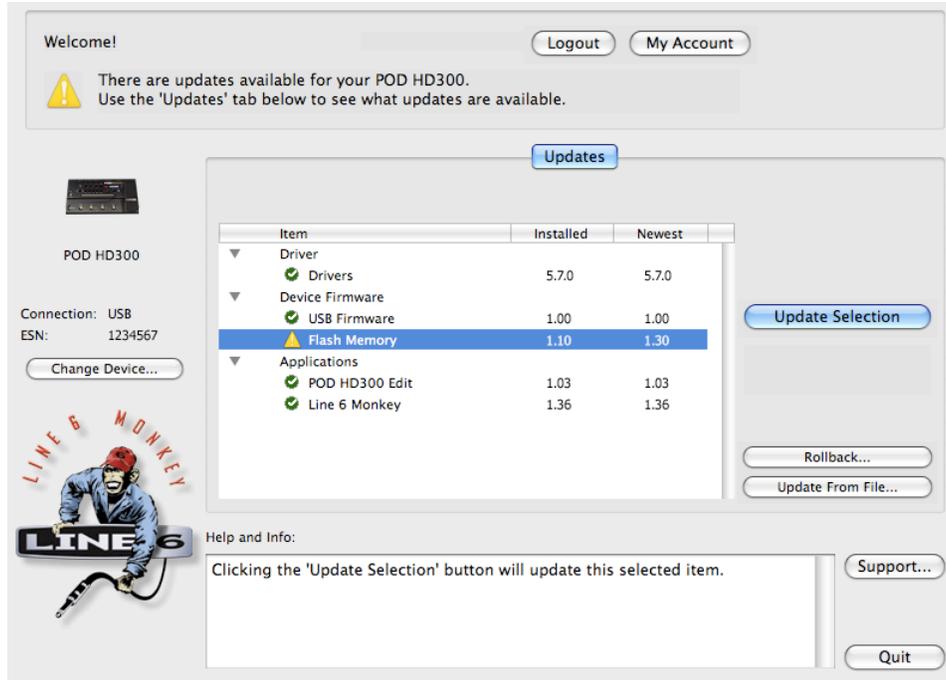

If you don't already have Line 6 Monkey installed, you can download Line 6 Monkey from www.line6.com/monkey.

To follow are the steps for updating your device using Line 6 Monkey on Mac OS® X, however, the steps are the same for Windows® as well, except where noted.

With your device connected to your computer's USB port, be sure your device is powered on, then launch Line 6 Monkey. If Monkey prompts you to register your device, then do so now - it may be required to register to obtain some product updates. Just follow the prompts and Monkey will walk you right through a quick online registration! Return to Line 6 Monkey once you've completed the registration.

Monkey will then display your device's current firmware version and any available updates.

The Line 6 Monkey Updates screen, with POD HD300 connected

In the above example, Monkey has detected that a newer Firmware - Flash Memory version is available. To update the firmware, select the Flash Memory item and click **Update Selection**. Be sure to read the prompts carefully and Monkey will walk you through the steps to perform the update. It is especially important not to disturb your devices' controls and USB connection during the update! Exit Line 6 Monkey once the firmware update completes successfully.
